

## Continuously monitoring pressures held within clean areas

### Features:

- Continuous Monitoring
- Wall mounted kit
- High quality pressure gauge
- Live real time view of pressure in Pascals

The APG Series is a quality analogue based system for measuring both positive and negative differential pressure.

The Apreco APG senses the pressure of air and compatible gases. The housing is specifically designed to enable the gauge to be removed for annual servicing and calibration.

A wide range of models are available factory calibrated to specific ranges. Pressure connections are inherent to the glass filled plastic moulded housing making installation quick and easy.

### Installation

Each system is supplied in kit form which is easily installed by competent engineers. Full installation and operating instructions are included with each system kit

### Product Data

#### 200019 – -30 to +30 Pa range APG

Accuracy	±2% F.S. at 21.1°C
Size	102mm dia face
Temperature Limits	-6.67 to 60°C
Pressure Limits	1.034 bar (15 psig)
Mounting Orientation	Diaphragm in vertical position
